PROFESSIONAL SUMMARY

Aspiring Java Backend Engineer with a strong foundation in data structures, microservices architectures, and cloud deployment. Proven ability in developing backend systems utilizing the Spring ecosystem, containerization, and distributed real-time messaging frameworks. A structured problem solver adept at optimizing application performance and building robust, scalable codebases.

TECHNICAL SKILLS

Languages : Java, C++, Python, SQL, HTML5, CSS3, JavaScript

Frameworks : Spring Core, Spring Boot, Spring Data JPA, Spring Security

Cloud & DevOps: Amazon Web Services (AWS EC2, S3), Microsoft Azure, Docker

Databases & Queues: MySQL, PostgreSQL, Apache Kafka, RabbitMQ

Tools & Arch : Git, GitHub, Postman, RESTful APIs, Microservices Architecture

TECHNICAL PROJECTS

Full-Stack E-Commerce Platform | Java, Spring Boot, Spring Security, MySQL, React.js, AWS

- Architected a full-stack e-commerce application integrating a responsive frontend UI with a scalable Spring Boot backend ecosystem.
- Implemented secure user authentication and stateless session management utilizing Spring Security and JSON Web Tokens (JWT).
- Containerized the production application build using Docker and deployed onto AWS EC2 and Azure App Services.

Distributed Asynchronous Queue Management System | Java, Spring Boot, Kafka, PostgreSQL, Docker

- Developed a high-throughput backend server engineered to process data-intensive background tasks asynchronously.
 - Utilized Apache Kafka and RabbitMQ pipelines to decouple request ingestion from intensive background processing, mitigating server bottlenecks.
 - Engineered resilient transactional logging utilizing PostgreSQL to safeguard data persistence across asynchronous worker nodes.
